Lewis Chan

System Architect | Full Stack Engineer | AI-Assisted Development Specialist

📧 lewsiafat@gmail.com | 💼 LinkedIn | 🌐 Portfolio

Professional Summary

With 15 years of software development and 5 years of technical management experience, I specialize in building highly efficient development workflows and automated systems. Currently serving as a Tech Lead, I have guided teams to deliver over 500 game products. I excel in full-stack development, DevOps automation integration, and am dedicated to introducing AI technologies into the Software Development Life Cycle (SDLC). My recent open-source projects all adopt an AI collaboration model, demonstrating my practical application skills with emerging technologies and my continuous pursuit of productivity enhancement.

Core Skills

- **Programming Languages:** Python, JavaScript, Lua, Shell Script
- **Frontend Frameworks:** Vue, Cocos2dx
- **Backend Development:** FastAPI, Node.js, SQL
- **DevOps & Tools:** API integration, Nginx, CI/CD Automation, Shell Script
- **AI Applications:** Antigravity, Gemini CLI, Claude Code, SDD (Spec-Driven Development), AI Skills, Vibe Coding, AI Agents, NanoClaw Deploy, MCP (Model Context Protocol), AI-Assisted Full-stack

---

Work Experience

Tech Lead | Tianxu International

2020 - Present (5 years)

Leading a 6-person technical team, responsible for the R&D and delivery of game product lines, establishing a standardized game production line.

- **R&D Workflow Optimization:** Designed and implemented a standardized development process, stabilizing the development cycle of a single game to within 2 weeks, with the team's monthly capacity reaching 18 games.
- **Automated Tool Development:**
  - **Project Management Platform:** Integrated Vue3, Electron, and Python to centrally manage the project lifecycle.
  - **Automated Build System (LittleGameCLITool):**
    - Developed a Python command-line tool using Standard Template and Symbolic Links technologies to achieve standardized builds for game projects.
    - Integrated GitLab API and CI/CD workflows to automate project creation, resource packaging, version release, and other lifecycle management tasks.
    - Results: Reduced project creation time from 5 minutes to 30 seconds, and optimized the size of a single project from 450MB to around 10MB through a resource sharing mechanism.
  - **Resource Optimization Tool:** Developed an online image packaging and compression service, cumulatively saving significant software procurement costs.
- **AI Introduction & Quality Control:**

- Introduced an AI-assisted Code Review process, improving the consistency of code reviews and saving an average of 62.5% review time per project.
- Established team guidelines for AI usage, enhancing overall development efficiency.

Senior Engineer | Tianxu International

2018 - 2020 (2 years)

Responsible for the core logic development of casino games and platform integration.

- **Game Development:** Independently handled the development of multiple platform-matching games and betting machine games.
- **Technical Research:** Researched and implemented image encryption technologies, improving product security.
- **Tech Stack:** Cocos2dx-lua, Python

Senior Engineer | International Games System Co., Ltd. (IGS)

2013 - 2018 (5 years)

Participated in the core development during the founding stage of a casino game platform, assisting the team in technical transformation.

- **Technical Transformation Leadership:** Assisted the team in smoothly transitioning from Flash web games to the Cocos2dx mobile game development framework.
- **Architecture Design:** Introduced MVC architecture and Dependency Injection patterns, improving code maintainability and reusability.
- **Shared Module Development:** Designed a shared component system for Slot games, significantly reducing the development time for new games.
- **Deployment Optimization:** Optimized the release process, reducing version deployment time by over 50%.

Senior Engineer | HeiMi Digital

2011 - 2013 (2 years)

- Full-stack web development and Flash editor tool development (Flex, PHP, MySQL).

Engineer | InfoPower

2009 - 2011 (2 years)

- Responsible for the development and maintenance of enterprise-level projects, participated in the design of ETL data processing workflows (Java, MS-SQL).

Side Projects & Open Source Contributions

AICodeReviewCLI

AI-Driven Command Line Code Review Tool *August 2025 - October 2025*

- **Project Overview:** A CLI tool integrating multiple AI models (Gemini, GPT, Claude, Grok) aimed at solving the efficiency bottleneck of manual Code Reviews.
- **Tech Stack:** Python, Design Patterns (Strategy/Factory), Multi-AI Integration.

- **Key Results:**
  - Successfully adopted by a 6-person team, reducing review time from an average of 4 days per month to 2 days.
  - Introduced customized prompts to enhance AI review consistency.
  - Supports Git mode and File mode, flexibly adapting to different development scenarios.
  - Pure command-line operation with no GUI, suitable for remote development environments.
- 🔗 GitHub

WebShareee

Lightweight Static Web Hosting Service *August 2025 - September 2025*

- **Project Overview:** Addresses the need for quick sharing and previewing of AI-generated content (Markdown/HTML), providing a one-click deployment solution.
- **Tech Stack:** Vue3, FastAPI, SQLite, Nginx.
- **Key Results:**
  - Utilized an AI-assisted development model to complete MVP development and deployment within 2 weeks.
  - Implemented a frontend-backend separated architecture and a complete user authentication system.
  - Serves as an internal platform for sharing Code Review results within the team.
- 🔗 GitHub

LazyBrother

AI-Driven Candlestick Chart Analysis

- **Project Overview:** An intelligent K-line analyzer combining pattern recognition, technical indicators, and LLM analysis.
- **Tech Stack:** Python, LLM, SMC, AI
- 🔗 GitHub

scalping-trade

Professional Real-time Trading Signal Analysis

- **Project Overview:** A comprehensive trading platform featuring 8 technical indicators, smart alerts, and strategy snapshot management.
- **Tech Stack:** Python, REST API, Real-time, Vibe Code, AI
- 🔗 GitHub

Subscreen

Touch Screen for Presto Development Board

- **Project Overview:** A touch display solution built for the Pimoroni Presto development board based on MicroPython.
- **Tech Stack:** MicroPython, Touch UI, SmartScreen, IoT
- 🔗 GitHub

Picore-W

Raspberry Pi Pico W WiFi Framework

- **Project Overview:** A robust WiFi management framework with auto-reconnect capabilities and template design.
- **Tech Stack:** MicroPython, Pico W, IoT
- 🔗 GitHub

Pomodoro Timer

Pomodoro Technique Focus Timer

- **Project Overview:** Professional Pomodoro timer app with circular progress, task management, focus statistics, and browser notifications.
- **Tech Stack:** HTML5, JavaScript, Express, Vibe Code
- **Key Results:**
  - Classic 25/5/15 minute Pomodoro technique with auto-cycle and skip functionality.
  - Circular progress bar visualizing time flow, with Web Audio API sound alerts and browser desktop notifications.
  - Built-in task list management, tracking Pomodoro count per task and daily statistics.
  - GitHub Actions auto-deployment to VPS with systemd + Nginx reverse proxy.
- 🔗 GitHub

zhuyin-game

Zhuyin Typing Adventure — Browser-Based Zhuyin Typing Practice Game

- **Project Overview:** A gamified typing practice where players defeat monsters by typing correct Zhuyin (Bopomofo) symbols. Supports physical keyboard and on-screen virtual keyboard, featuring a leveling system and HP mechanics.
- **Tech Stack:** Vue 3, PixiJS, Express, Vite, Vibe Coding, NanoClaw
